

Compressive Strength	(Raw) Minimum 40 Mpa (Unconfined) Minimum 36 Mpa
Slip Resistance	Shotblast pavers shall have a slip resistance of class “V” – Contribution of floor surface to the risk of slipping when wet: <i>very low</i> Honed pavers shall have a slip resistance of class “W” – Contribution of floor surface to the risk of slipping when wet: <i>low</i>
Breaking Load	Breaking load will vary in accordance with plan dimension and thickness. All pavers will have a minimum breaking load of 5kN
Abrasion	Mean abrasion index shall be a maximum of 3.5
Dimensional Deviation	Category DPB2 Pavers shall not deviate from plan dimension by more than +/- 2.5mm Pavers shall not deviate from height dimension by more than +/- 2.0mm
